

Multifamily Metro Outlook:

San Jose - Q2 2023

Overview:

- After a period in which the metro was achieving above-average levels of growth, it appears that momentum in the San Jose job market has come back down to Earth. For the period ending Q2 2023, job growth in the metro was approximately 1.6% compared to the national average of 1.5% during the same period.
- Despite some nationwide cooling regarding apartment fundamental performance, San Jose apartment fundamentals are trending in the right direction. For the period ending Q2 2023 vacancy rates in the metro were nearly 4.75% and rent growth was positive at approximately 0.5% during the same period.

Market Strengths:

- Despite an overall slowdown in the Tech/Information sector that began late last year, the local sector in the San Jose metro is still performing ahead of national trends. For the period ending Q2 2023, the local information sector contracted by -0.2% compared to -1.5% nationally.
- The slowdown in the Tech/Information sector in the metro has been able to mitigate the local impact of jobs lost according to Moody's Analytics. One of the main reasons that the tech slowdown hasn't been as bad as once thought is mainly due to the high concentration of remote and telework that exists in the metro.

Market Weaknesses:

- San Jose is an extremely expensive place to live, with costs of living and business costs, respectively, +79% and +67% higher than the national averages. San Jose has a negative rate of prime renter cohort population despite having tech jobs that typically attract this demographic. The increased costs of living coupled with the remote working culture, have exacerbated some of the demographic trends in the metro.
- As the cost of doing business via labor and land costs rises, more tech firms located in the metro are relocating their expansion. According to Moody's Analytics, many firms have begun to move to less expensive metros such as Los Angeles, Oakland, Utah, Washington and even Oregon. Furthermore, the ongoing slowdown in the tech sector has only increased the desire to pivot away from Silicon Valley and lower costs. Many tech firms have recently been victims of hyper-valuation only to see their value drop significantly after their IPO occurs.

Development:

- Apartment development in San Jose has been moderate as just 19,000 rental units have been completed since 2017. Currently, 9,200 units are underway with an additional 39,000 in the planning stages.

Outlook:

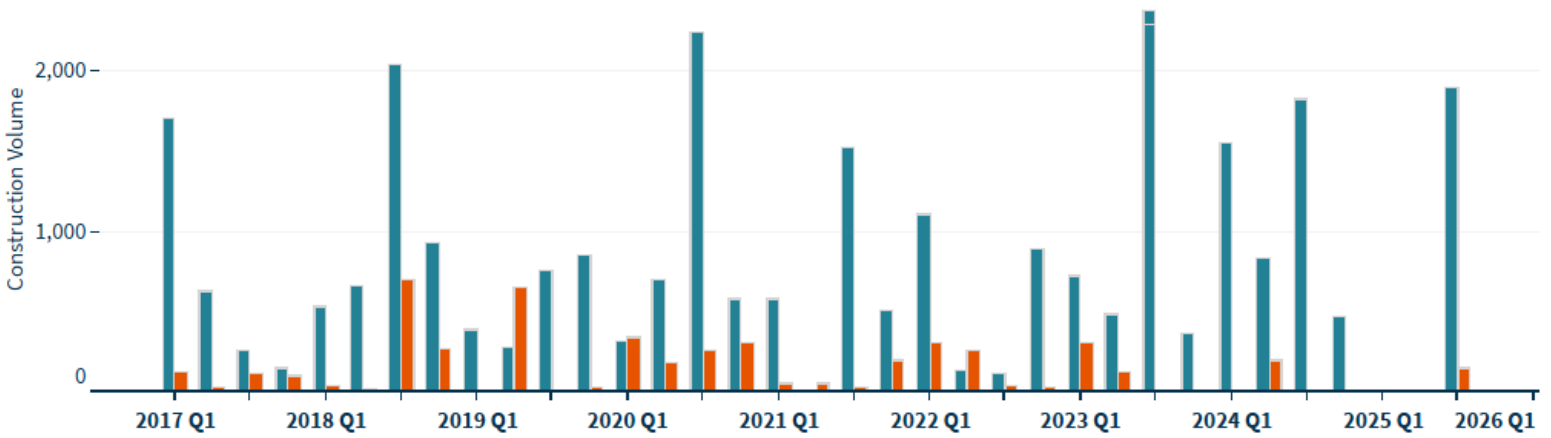

- Despite a nationwide slowdown for apartment fundamentals, San Jose's apartment fundamentals are actually moving in the right direction. The lack of single-family affordability in the metro will be a boon for the apartment market, however remote working has taken away many would-be renters away from the local apartment renting population.
- The volatile tech and information sector is experiencing a period of moderation. Despite a slowdown that has been occurring for more than a year, the effects are not as bad as initially feared. The pivot to remote and teleworking has mitigated the impacts of the local tech slowdown and overall job growth remains above the national level of performance. However, in addition to overall tech sector slowdowns, the metro remains extremely expensive place to conduct business and is in risk of losing jobs altogether because of increased adoption of remote working. Teleworking has a ripple effect on the local economy as other employment sectors such as Leisure and Hospitality suffer as they thrive from the performance of the tech sector. As long as the pillar of economic growth is experiencing a volatile period, San Jose will continue to underperform to the levels that the metro is used to seeing.
