

DUS 360® Release Notes – Release 26.2

Date: Monday, Aug. 24

Subject line: Enhancing Credit Facility Property Revaluations through DUS 360®

As part of our continued Acquisition Modernization and investment in enhancing the Credit Facility experience Fannie Mae has introduced a new property revaluation workflow in DUS 360®.

Starting today, Aug. 24, 2026, Credit Facility properties will be able to submit, manage, and track property revaluation requests directly within DUS 360, creating a more streamlined and transparent experience from submission through approval.

Why we're making this change

Today, the property revaluation process relies on multiple systems, manual submissions, and offline coordination. By bringing this workflow into DUS 360®, we're simplifying how revaluation requests are managed while creating a more connected experience across the Credit Facility lifecycle.

Key benefits

- Access the latest approved property valuation data digitally in DUS 360
- Greater visibility into request status and next steps
- Faster access to data and more time saved
- Improved data quality through direct capture of approved property values

Features in this release

- A simpler, centralized process for submitting and managing revaluation requests
- Less manual effort through reduced email coordination and duplicate data entry
- Easier multi-property updates through Bulk Upload
- Timely email notifications for valuation decisions, changes, and updates

Building a more connected experience

This enhancement is one of several improvements being introduced in the coming months as a part our effort to create a more connected and efficient Credit Facility experience. Moving property revaluations into DUS 360 is an important step in that journey and lays the foundation for a modern, integrated lending experience.

Underwriting, Risk Reporting, and other downstream systems.
