

DUS Insurance Submission API

The DUS Insurance Submission API enables Fannie Mae Multifamily Lenders to fulfill the new requirement to submit flood insurance data for every new property at the time of acquisition. Part of the DUS Data Digitizer® product suite, this API offers a fully automated alternative to the user interface manual upload.

Benefits

- **Simplified Submission:** Enable Lenders to quickly share key data about the property and insurance coverage with Fannie Mae through seamless data transmission.
- **Increased Efficiency:** Reduce manual submissions by automating the process of submitting data.
- **Reduced Risk:** Makes more informed risk management decisions related to insurance coverage and exposure risk for Multifamily property collateral.

Key Features

- Enables collection of data from known sources.
- Easy to adopt data model.
- Easy to scale to address all types of insurance coverage for Fannie Mae Multifamily properties.
- Easy to integrate using standard API protocols.

Release Cadence & Support

- **Quarterly API Enhancements:** New features and bug fixes typically released quarterly.
- **Swagger Documentation:** Always reference the latest Swagger file for API specs.
- **Dedicated Support:** Technical support and integration guidance available during and after onboarding.
