

Metro Housing Outlook:

Philadelphia - Q2 2024

Overview:

- Although later than most large metros, Philadelphia is finally in the late expansion phase of its job market recovery. Recovery in the metro continues to build positive momentum from previous quarters, as job growth outperformed the national rate for 2023. However, even though job growth was robust in 2023, it has slowed for two consecutive quarters in 2024. For the period ending Q2 2024, local job growth expanded by 1.3%, which was slightly below the national rate of 1.5%, according to CoStar.
- The local apartment market continues to perform decently despite recent softening that can be attributed to the current economic environment's elevated interest rates. The vacancy rate has been hovering around full (which is approximately 4%) for much of the past year but has recently inched up to 5.75% during Q2 2024, and rent growth remains positive at 1.25% during the same period.

Market Strengths:

- Both the costs of living and costs of business in the metro are approximately 3% and 1% (respectively) below the national averages, according to Moody's Analytics. Furthermore, as a result of the pandemic and many employers pivoting to a hybrid employment model, many in the prime renter cohort, specifically millennials, have taken advantage of the new corporate working environment. According to CoStar, despite the overall population growth rate performing lower than the national average, since 2019, the population growth rate in the Philadelphia suburbs has expanded by approximately 2.3%.
- According to Moody's Analytics, there has been a recent surge in return-to-office mandates, which has boosted white-collar employment in both the financial activities and professional business services employment sectors. With large employers such as Comcast issuing return-to-office mandates, public transit ridership rates have increased nearly 20% year-over-year and are within 80% of pre-pandemic levels.

Market Weaknesses:

- Philadelphia has an unfavorable population growth rate. According to Moody's Analytics, over the five-year forecast, the population growth rate is expected to be flat (0%) compared to 0.4% growth nationally. Furthermore, the 25-44 age cohort, which helped spur local economic growth and home values during the last economic downturn, grew at a rate twice the national rate during the period ending Q2 2024. However, this cohort is now contracting by -1.2% compared to -0.4% nationally.
- According to Moody's Analytics, Philadelphia's apartment sector is bracing for challenges, as an influx of new supply is anticipated in the downtown area through 2025. The uptick in supply follows the reduction of a residential building tax abatement for permits filed in 2022. As these buildings come online, the market may encounter a significant increase in residential supply in the near term and increasing softness in vacancy performance.

Outlook:

- Despite headwinds from the current economic fundamentals, apartment market fundamentals continue to perform decently. While supply is ramping up with approximately 18,000 units in the pipeline, the new supply should not alter the steady market, largely due to the limited supply that came online within the last few years and the emergence of the younger cohort moving to downtown and urban areas.
- Philadelphia's economy is projected to continue slowing down throughout the rest of 2024. While health care services will continue to expand, it will do so at a pace slower than previous years (when growth was robust), requiring other sectors to compensate for this deceleration. In the long run, unfavorable demographics and a challenging business environment are likely to result in job growth that outpaces the state average but remains behind national trends. As various industries attempt to pick up the slack, it will be crucial for sectors like technology and professional services to maintain robust growth to support overall economic stability.
